

## *WSU School of Medicine Admissions Technical Standards for Medical School Applicants*

### School of Medicine

#### Technical Standards:

The Admissions Committee of Wayne State University School of Medicine will consider for admission to the School of Medicine any applicant who demonstrates the ability to acquire the knowledge necessary for the practice of medicine, as well as the ability to perform or to learn to perform the skills as described in this document. Students will be judged not only on their scholastic accomplishments but also on their physical and emotional capacities to meet the full requirements of the school's curriculum and to graduate as skilled and effective practitioners of medicine.

The law requires that a student with a disability be provided with reasonable accommodations for his/her disability. However, there is no requirement to provide an accommodation that would alter the technical standards of a program or the essential elements of a course in a fundamental way. A reasonable accommodation is decided on a case-by-case basis through an interactive process with the requesting student.

A candidate for the MD degree must possess abilities and skills, which include those that are observational, communicational, motor, intellectual-conceptual (integrative and quantitative), and behavioral and social. Those abilities and skills are outlined in detail below:

#### **I. Observation:**

The candidate must be able to acquire a defined level of required information as presented through demonstrations and experiences in the basic sciences, including but not limited to information conveyed through physiologic and pharmacological demonstrations in animals, microbiological cultures and microscopic images of microorganisms and tissues in normal and pathological states. Furthermore, a candidate must be able:

- To observe a patient accurately, at a distance, and close at hand, to acquire information from written documents, and to visualize information as presented in images from paper, films, slides or video.
- To interpret x-ray and other graphic images, and digital or analog representations of physiologic phenomenon (such as EKGs) with or without the use of assistive devices. A request for use of an assistive device is a request for an accommodation that will be evaluated as indicated above. Such observation and information acquisition necessitates the functional use of visual, auditory and somatic sensation while being enhanced by the functional use of other sensory modalities. In any case where a candidate's ability to observe or acquire information through these sensory modalities is compromised, the candidate must demonstrate alternative means and/or abilities to acquire and demonstrate the essential information conveyed in this fashion.

#### **II. Communication:**

A candidate must be able to speak, to hear and to observe patients by sight in order to elicit information, describe changes in mood, activity and posture, and perceive nonverbal communications. A candidate must be able to communicate effectively and sensitively with patients. Communication includes speech, reading and writing. The candidate must be able to communicate effectively and efficiently in oral and written form with all members of the health

care team.

**III. Motor:**

It is required that a candidate possesses the motor skills necessary to directly perform palpation, percussion, auscultation and other diagnostic procedures. The candidate must be able to execute motor movements reasonably required to provide general and emergency medical care such as airway management, placement of intravenous catheters, cardiopulmonary resuscitation, application of pressure to control bleeding, suturing of wounds and the performance of simple obstetrical maneuvers. Such actions require coordination of both gross and fine muscular movements, equilibrium and functional use of the senses of touch and vision.

**IV. Intellectual-Conceptual (Integrative and Quantitative) Abilities:**

The candidate must be able to measure, calculate, reason, analyze, integrate and synthesize. In addition, the candidate must be able to comprehend three-dimensional relationships and to understand the spatial relationships of structures. Problem solving, the critical skill demanded of physicians, requires all of these intellectual abilities. The candidate must be able to perform these problem-solving skills in a timely fashion.

**V. Behavioral and Social Attributes:**

The candidate must possess the emotional health required for full utilization of his/her intellectual abilities, the exercise of good judgment, the prompt completion of all responsibilities attendant to the diagnosis and care of patients, and the development of mature, sensitive, and effective relationships with patients. The candidate must be able to tolerate physically taxing workloads and to function effectively under stress. He/she must be able to adapt to changing environments, to display flexibility, and to learn to function in the face of uncertainties inherent in the clinical problems of patients. Compassion, integrity, concern for others, interpersonal skills, interest and motivation are all personal qualities that will be assessed during the admissions and educational processes.

**VI. Ability to Comply with Clinical Patient Safety and Health Standards Policies:**

Wayne State University School of Medicine students are required to comply with all patient safety standards and requirements at the sites of their clinical rotations. This includes but is not limited to wearing hospital-approved operating room attire, following regulations related to sterilization procedures, and receipt of specific immunizations and/or evidence of immunity from specific diseases. Students must undergo periodic health testing in order to receive instruction in clinical settings and perform the essential function of a medical student. Additional information is in Refusal of Required Immunizations or Medical Testing Policy. It should be noted that failure to meet the requirements for patient safety, vaccination and/or health testing will result in the student not being permitted to train in affiliated clinical facilities, thereby preventing the student from completing the required curricular activities needed to receive the Medical Doctor (M.D.) degree.

I have read and understand the above technical standards and I hereby certify that I am able to meet these standards if I become a medical student at the Wayne State University School of Medicine.
